DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 1,2-6 and 8-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Komatsu et al. (US 2003/0081440).

Art Unit: 2838

Nakamura et al. discloses claimed subject matters a voltage conversion device a converting a DC voltage from a DC power supply in to output (figure 1), including a voltage converter (figure 1, item 12), a detection means (figure 1, item 13), a control means (figure 1, item 30), a computer readable medium (see claim 34-43) and for feedback control (inherent) Signal PWMU is a signal for driving voltage step-up converter 12 to convert the DC voltage from capacitor C1 into output voltage Vm. When voltage step-up converter 12 converts the DC voltage into output voltage Vm, control device 30 conducts feedback control of output voltage Vm by generating signal PWMU for driving voltage step-up converter 12 in such a manner that output voltage Vm is equal to voltage command Vdc com. A description of the method of generating signal PWMU (figure 1, item PWU). Further circuit meets the structural limitation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rajnikant B. Patel whose telephone number is 571-272-2082. The examiner can normally be reached on 6.30-5.00; m-f.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Karl Easthom can be reached on 571-272-1989. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
